

Taiwan Paiho Limited

Move forward with PAIHO on an immersive journey of environmental protection journey, TITAS, starting on October 12th.

Recycling is a topical subject for the fashion industry.

Given the urgency of zero emissions in 2050, the design team of PAIHO utilizes paper fibers and recycled yarns to launch a unique plain weave textured fabric to implement sustainable fashion ideas.

The special plain weave textured fabric made of environmentally friendly paper fibers and recycled yarns has a unique moisturizing feel and durability, and has passed rigorous wear and tear resistance tests; your traditional impression of "paper" material can be applied to a wide range of industries; whether it is bagged, shoe materials, clothing accessories.

PAIHO is scheduled to hold a dynamic catwalk during the TITAS exhibition.

The event will feature several models who will dynamically demonstrate the application of environmentally friendly materials and the practice of sustainable development in the fashion industry through clothing, bags, shoes, etc. It is hoped that this exhibition will promote the development of environmental protection issues and let the seeds of environmental protection and sustainability germinate in the fashion industry.
