OSHIMA

AI Intelligent Production System

OSHIMA is one of the leading enterprises that successfully incorporate AI applications and digital intelligent manufacturing in garment production. At TITAS 2019 OSHIMA will present its intelligent spreading system - a system that carries out sourcing, burling, fabric relaxing, shrinking, spreading, cutting, pressing, fusing and heat transferring, inspecting, ironing, packing, needle detecting, and packaging all in one stop.

By AI digitized intelligent manufacturing facilities and continuous efforts to automatic production processes, traditionally labor intensive textile industry shows agility from synergy with technology. Artificial intelligence, big data, and digitalization are utilized to increase production flexibility so the production lines can fully respond to short lead time in orders and meet the order deadlines quickly. Advanced production facilities link up the production value chain and result in better professional and flexible services.
