

KAULIN MFG. CO., LTD.

Sew much better

SIRUBA found in 1965, and for half a century, we develop and manufacture industrial sewing machines, to provide service and solution all around the world for our customers and partners. From the earliest day we carried sewing machines to visit clients on foot, and now we have become the top leading brand in Taiwan. Every step we made, presents our solid, unswerving, and responsible commitment.

We devote ourselves to contributing sewing industry; we have various sewing machine products, which can be applied on numerous sewing procedures, like our best-selling OVERLOCK and INTERLOCK sewing machines, computer-controlled BAR-TACKING and BUTTON-HOLING machines. We also released a full line-up of automatic sewing machines combining higher positioning accuracy and craftsman's touch, to fulfill customers' needs in many categories like knitwear, jeans and sportswear.

SIRUBA focuses more than just improving machine functional features, also achieving high levels of precision machined parts and components because a small deviation of machined parts and components from the standard value will directly impact on machine quality and performance. Providing quality products is always our primarily responsibility and top concern.
