Logic Art Automation Co., Ltd. iTCC⁺ Integration Textile Cloud Chain

Logic Art is a leading manufacturer of dyeing and finishing automation equipment, certified by the Bureau of Industry, and is the only qualified information service provider in the textile equipment industry. Logic Art has developed and owned more than 40 global patented technologies, and the dispensing machine is the world's most famous representative in the world. Connecting the A-Team textile dyeing and finishing equipment industry supply chain in Taiwan with the technical advantages of IDCC Intelligent Data Control Center, from stand-alone automated data collection, cloud technology analysis, and manufacturing big data to improving productivity, providing professional and intelligent production solutions and services.

Integrating various high-quality Taiwanese equipment manufacturers with Logic Art as the center, such as sewing, dyeing, setting, cloth inspection, brushing, dye auxiliaries, etc., has become the service model of the Total Solution supply chain. Based on Chunghwa Telecom's IaaS development, the textile digital cloud platform PaaS is developed through the Information Policy Council, and the yarn weaving and dyeing module SaaS, textile equipment cloud SaaS, and textile supply chain integration SaaS are established. Solve the pain points of the textile industry and enable small and medium-sized textile manufacturers to meet customer needs.

With the establishment of a cloud service platform, SaaS services are provided to, easily and quickly, solve supply chain communication problems. Using the orders from the brand owners to drive small and medium-sized supply chain manufacturers to implement production data integration cloud platform services, small and medium-sized textile factories in Taiwan can use the textile cloud platform to digitally upgrade to effectively win international orders. It is expected that through the growth of the overall industry of textile supply chain manufacturers and textile equipment manufacturers, we will continue to develop new SaaS to maintain competitiveness in the international market. Increase employment opportunities and jointly drive the use of cloud platform digital transformation services for small and medium-sized textile mills in Taiwan, in line with the development of smart functions, sustainable environmental protection, and digital transformation of Taiwan's textile industry in 2030, and contribute to Taiwan's economic benefits.
