TOYOBO (TAIWAN)

Revolution of the Garment Industry

At TITAS 2019, TOYOBO (TAIWAN) will offer a brand new production model. They will provide one of the most powerful and complete digital solutions in the field by demonstrating an automatic process from design and development to production and delivery, covering "Computerized pattern designing, 3D clothing simulation software, Digital fabric printing, Auto cutter with contour cutting function, Automatic template sewing machine". They will also display AR works, the result of cooperation with Hsuan Chuang University, which will facilitate their partners to attract consumers and create unforgettable dressing experience for them.

In face of the fast-changing consumer market, the garment industry encounters increasing demands for customized products and services as well as shortened product delivery time, which leads to the rise of micro orders.

Adhering to the company motto "Contributing to the realization of a sustainable society through the provision of products and services that will create a wealthy mind and life for people", TOYOBO (TAIWAN) is ready for the future with new concepts, new designs and new strategic models of production.
